E<sup>3</sup>UDRES<sup>2</sup> is a European University Alliance - a network of higher education institutions (HEIs) located in Europe, that have decided to closely work together and collaborate in the fields of research, teaching, innovation and beyond.

Innovative cooperation in **research, teaching, knowledge transfer** and **innovation**. Despite geographical, economic and cultural diversity, European regions face many common challenges due to:

- **Social distances & Spatial distances**
- **Technological distances**
- **Structural distances**

During the implementation phase, an additional internal project called **Change CornEr** was established. This project has several important missions and aims, and one of them is to enable future students in helping to change society's attitude towards the environment and sustainability.

This research included focus groups, role plays, interviews and/or observations to find out how prepared schools are to get involved in enabling principles of sustainability and circularity. Different lecturing and seminar materials were used to prepare the different methodological approaches. Focus groups included teachers of primary and secondary schools, as well as pupils of secondary schools. The first results show remarkable levels of readiness to be and get involved in all necessary processes for the introduction of circularity principles in everyday life but also some lack of knowledge. The research will be continued by involving other representative groups of the society in local communities.

## The first results: Just two examples

Students from 6 E<sup>3</sup>UDRES<sup>2</sup> institutions had the chance to discuss with pupils from Austria and learn about their school's good practices on sustainability and waste reduction (STPUAS, Austria).

After taking into consideration their regional good practices and challenges, as well as the exchange they had with Austrian pupils, citizens, and stakeholders, they presented their "Circular Exchange" social media campaign to raise awareness on circular economy.

**Acknowledgements:** The research is part of the E<sup>3</sup>UDRES<sup>2</sup> project which receives funding from the European Union.

## WP4: Researchers

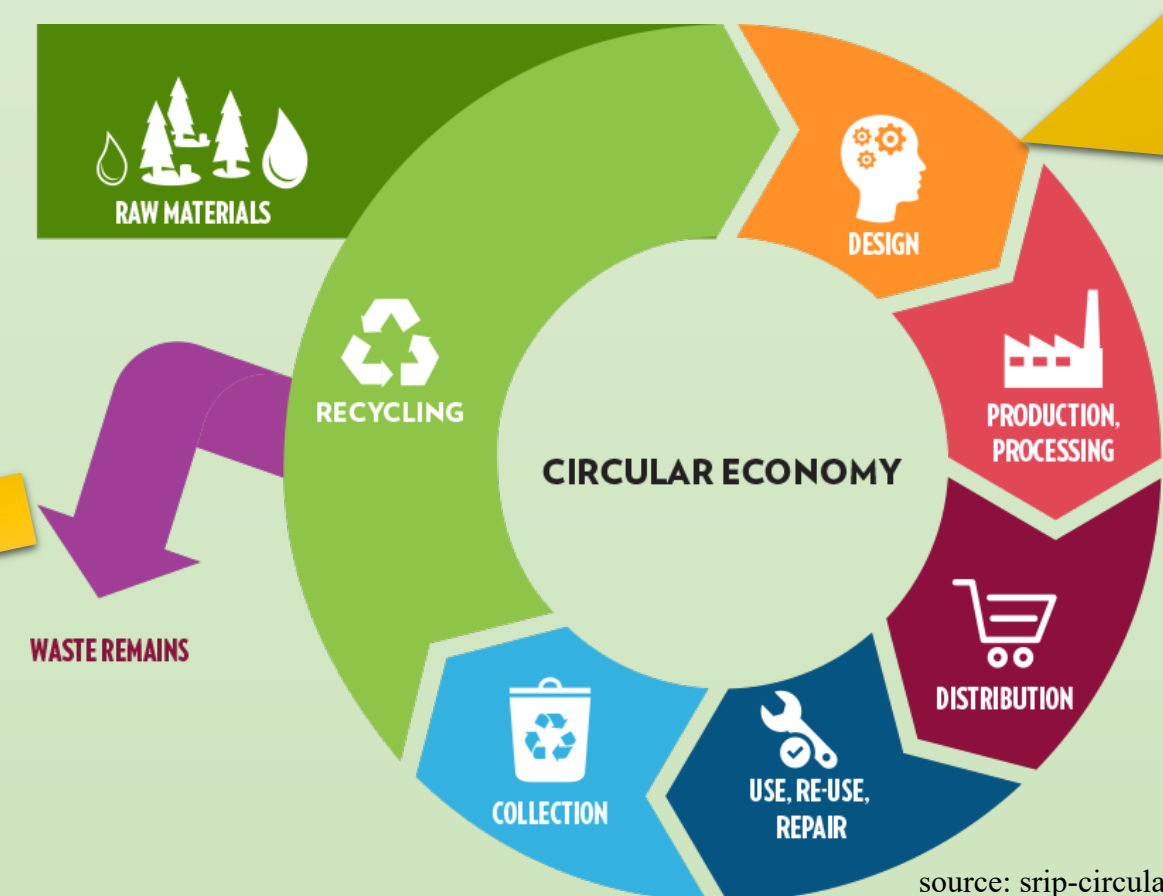

E<sup>3</sup>UDRES<sup>2</sup> Work Packages:

- Creation of R&D networks
- E<sup>3</sup>UDRES<sup>2</sup> postdoctoral fellowships
- Development of i-research projects
- E<sup>3</sup>UDRES<sup>2</sup> citizen science projects

3 main focus groups:  
**CE:** Circular Economy  
**WB&A:** Well Being and Ageing  
**HCtAI:** Human Contribution to AI

## Circular economy (CE)

Ideas of Valmiera citizens to introduce circularity principles in everyday life (Vidzeme UAS, Latvia). These ideas will be passed to Eco-council of Vidzeme UAS to implement in new projects

What you would like to change to become more sustainability and circularity oriented?	Right away/ Immediately!	In a year!	In the nearest future!
<b>All together, in the World</b>	Change attitude to environment and sustainability questions Stop wasting food Reduce waste in general To reduce food assortment in shops Usage of electric transport in general To reproduce everything what is possible and impossible To use sensors for lights	Use more renewable energy Reducing of packaging To clean up waste waters To make more popular walking/ running	to act collectively, with reason, not to fall into the traps of capitalism, to realize what the resources that we vitally need really are To produce and promote long life products stop producing and using of plastic packaging Stop polluting rivers, seas, oceans Stop eat meat
<b>All together, in Europe</b>	Smart waste sorting	to create a single law of environmental protection and sustainability that is followed throughout Europe, or even the world Stop advertising Reducing of packaging More wooden housing, less asfalta	To take care about clean surroundings/ water to show the best examples how to care for clean environment To grow new generations environmentally conscious To promote local producers To have more train transport instead of busses and cars
<b>All together, in Latvia</b>	Introduce mandatory requirement to use renewable energy options Stop buying too much staff - sales and price reductions Learn how to sort waste	Learn how to cooperate and create community	to develop a sustainability plan in which we live in comfort, but without harming ourselves and the planet
<b>All together, in Vidzeme</b>	Introduce bio-waste sorting points and educate the local community on environment-related topics More velo parking spaces To make more popular use of velo To teach consumers to use their bags for shopping More waste bins in cities	To organize waste collection (possibly sorting) in the nature parks, popular places (Gauja)	create an application where cafes/restaurants return uneaten food to students/residents instead of throwing it away More Zero waste concept shops More solar and wind energy stations
<b>Each individually</b>	Use less plastic products, save water, increase the energy efficiency of buildings Pick up random garbage Stop buying useless things Motivate individuals for greener approach to life Buy less cheap/low quality cloths Learn how to make composts from food waste	To develop active lifestyle Buy more second/ third hand goods More containers for textiles	More research in environment field To learn how to grow food To use deposit possibilities Use energy from greener sources
